

This virtual baccarat game allows players to bet on three possible outcomes: Banker win (Banker Bet), Player win (Player Bet), or a Tie (Tie Bet). The screen features a baccarat table with designated betting areas, a displayed player balance, and set betting limits.

Players place bets by selecting chips of various denominations (e.g., \$0.1, \$1, \$5) and positioning them on the chosen betting option. Once the bet is confirmed, the round begins, and the winner is determined according to standard baccarat rules.

A history panel on the left side of the screen tracks previous game results, helping players analyze patterns and refine their strategy. The casino-style interface enhances immersion, creating a realistic and engaging gaming experience.
